

Restore's Benefits

Gut Health

Restore is a new generation, earth-derived supplement. It's not a prebiotic. It's not a probiotic. Rather, it's a carbon rich, alkaline liquid, with lignite derived trace organics and essential trace amino acids, that promotes an optimal environment in the gut. With 70% of the immune system located in the gut, this optimal gut environment leads to great gut health. The hallmark of Restore is that it's based in science. Our research has shown Restore to be non-toxic and to support the tight junction cells in the gut lining.

Non-toxic

For example, we performed the "gold standard" toxicology study on Restore gut supplement and showed that it is non-toxic on kidney cells even at high doses.

Gut Barrier

Additionally, Restore has been shown both in the laboratory and clinically to help support the functioning of the gut barrier and improve gut health. In experiments, toxins like herbicides and gluten have been shown to degrade the gut barrier. Restore has been shown to promote the strengthening of the tight junction gut barrier in small and large bowel cells for gut health.

Lignite Extract

One of the main elements in Restore is the lignite extract. Lignite comes from decomposed prehistoric matter. As plants decomposed, they first form peat, which then turns into humate, then lignite, then leonardite and finally to coal. All of these are rich in carbon. One of the differences between all of these elements is the amount of time and pressure have been applied to them.

Testimonials

"This stuff is the real deal. I caught a horrible stomach virus while visiting my mom in the hospital a couple years ago, the sickest I'd ever been in my life. My digestive system was a mess for months afterwards. I bought some of this from my doctor and took a very small amount for a month or so. It fixed everything. I really do believe in it."
- L. Wood, January 2015

"I wanted to email you in case it was just a fluke but the RESTORE has REALLY helped my daughter. Since the second day of taking it, she's had regular stool and no bloating. She said she couldn't remember the last time she had "normal" "poop" and that her stomach is flat."
- Anonymous Mother, 2014
